DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 2 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 2 recites the limitation "the surface" in line 2 and claim 11 recites the limitation "the standard hole pattern of a boot binding" in line 2. There is insufficient antecedent basis for these limitations in the claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-6 are rejected under 35 U.S.C. 102(a) as being anticipated by Graham (6,634,657).

2. As to claim 1, Graham discloses a device that can be connected to a snowboard, the device includes a connecting component (34), a rotational component (122) and a handle component (124) (see Figs. 1 and 2) wherein the handle is connected to a snowboard such that the handle can rotate vertically and horizontally (when said snow board is rotated vertically and horizontally), and the handle can be grasped by one skiing behind the snow board to apply force to the handle to control the direction, speed

Art Unit: 3764

and edging of the snow board. Note, the prior art only needs to disclose a device that is capable of being grasped as claimed. That is, the prior does not need to disclose the intention of why the device is being grasped since that language merely speaks to the intended use of the device.

- 3. As to claim 2, Graham discloses a device as described above. Graham also disclose a means (flathead screws) of connecting the device to a surface of a snow board that uses a set of existing snowboard binding screw holes (See Col. 3, lines 22-29, in particular lines 24-25).
- 4. As to claim 3, Graham discloses a device as described above (see discussion of claim 1). Graham also discloses a means (pivot at 132) to provide rotation of a handle (124) both vertically and horizontally around one or more axes (see Fig. 2). Note, the transition of the handle from a horizontal position (ghost image) to the vertical position is a motion that includes both a vertical and a horizontal components (see Fig. 2).
- 5. As to claim 4, Graham discloses a device as described above (see discussion of claim 1). Graham also discloses a means (202) for detaching the handle (192) from the rotational component (156) and thus the snowboard (see Fig. 10).
- As to claim 5, Graham discloses a snowboarding training device comprising a handle (124) and means (34) for attaching the handle to a rear portion of a snowboard such that the handle is disposed for grasping by an instructor (see Figs. 1 and 2).
- 7. As to claim 6, Graham discloses a device as described above (see discussion of claim 5). Graham further discloses that the attaching means comprise a base plate (34) that is affixable to the snowboard using a coupling means (flathead screws and existing

Art Unit: 3764

holes in the snowboard) for a snowboard boot binding (See Col. 3, lines 22-29, in particular lines 24-25).

Claims 5 and 7 are rejected under 35 U.S.C. 102(a) as being anticipated by Anderson (1,535,391).

8. As to claims 5 and 7, Anderson discloses a device comprising a handle (35) and means (11,12 and "bolts or the like") for/capable of attaching the handle to a rearward portion of a snowboard such that the handle is disposed for grasping by an instructor wherein the attaching means comprises a swivel connector (17) being rotatable in a substantially horizontal plane.

Claim 10 is rejected under 35 U.S.C. 102(a) as being anticipated by Anderson (1,535,391).

9. As to claim 10, Anderson discloses a device comprising a base plate (11) being connectable to a snowboard, a swivel connector (17) affixed to the base plate, and a handle (37) engaging the swivel connector wherein the handle is configured to be grasped by an instructor (see Figs. 1 and 2).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8, 9 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al. (1,535,391).

Page 5

planes.

10. As to claim 8, Anderson discloses a device as described above (see discussion of claim 7). Anderson does not disclose that the handle is rotatably attached to the swivel connector such that the handle may pivot in a substantially vertical plane; however, Anderson's swivel connector does allow for the handle to be rotatable in both vertical and horizontal planes (see Figs. 1 and 4). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to use any of an array of swivel configurations including that disclosed by Anderson or the instant invention, since both swiveling configurations are considered to be functionally equivalent in the exercise art to provide for the rotation of handles connected thereto in both vertical and horizontal

- 11. As to claim 9, Anderson discloses a device as described above (see discussion of claim 7). Anderson also discloses that the handle is attached to the swivel connector via the shaft (48) that is disposed in a seat (47) of the swivel connector (see Fig. 6); however, Anderson does not disclose that the handle is removably attached to the swivel connector. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to make the handle removably attachable to the swivel connector (by making the shaft removably attachable to the seat) such that the overall device can be somewhat disassembled for compact storage or transport. The separation of elements, where removability is desirable, is a design consideration within the skill of the art. In re Duhlberg, 283 F.2d 522, 129 USPQ 348 (CCPA 1961).
- 12. As to claim 12, Anderson discloses a device as described above (see discussion of claim 10). Anderson further discloses that the swivel connector (17) is rotatable in a

Art Unit: 3764

substantially horizontal plane, but Anderson does not disclose that the handle is rotatably attached to the swivel connector such that the handle may pivot in a substantially vertical plane; however, Anderson's swivel connector does allow for the handle to be rotatable in both vertical and horizontal planes (see Figs. 1 and 4). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to use any of an array of swivel configurations including that disclosed by Anderson or the instant invention, since both swiveling configurations are considered to be functionally equivalent in the exercise art to provide for the rotation of handles connected thereto in both vertical and horizontal planes.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al. (1,535,391) in view of Bobrowicz (6,102,428).

13. As to claim 11, Anderson discloses a device as described above (see discussion of claim 10). Anderson also discloses that the base plate includes attachment holes (12) generally configured in a square pattern (see Fig. 3) wherein the holes may be used to affix the base plate to a snowboard such as that disclosed by Bobrowicz which includes binding holes in a square pattern (see Figs. 1,7 and 10-17, particularly Fig. 16).

Response to Arguments

14. Applicant's arguments with respect to claims 10-12 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

15. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 3764

Johnson '946 and March et al. '034 each disclose swivels having handles that can be attached to snowboards.

Schaller et al. '850, Drako '454, Schaller et al. '183 and Porte '741 are representative of the prior art that disclose snowboards having an array of different boot binding hole patterns.

16. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tam Nguyen whose telephone number is 571-272-4979. The examiner can normally be reached on M-F 9-5.

Application/Control Number: 10/707,719 Page 8
